

AI DATA ANNOTATION

Sample Portfolio Dataset — Mochammad Fathan

Task: Multi-Label Text Classification | Samples: 20 | Annotator: M. Fathan | Date: May 2026

Purpose of this document: This sample dataset demonstrates professional multi-label text annotation capability across 20 diverse real-world text samples. Each sample has been independently annotated for Primary Category, Sub-Category, Sentiment, Intent, Confidence Score (0.00–1.00), and Annotation Rationale Notes, consistent with standards used in LLM training, RLHF pipelines, and content moderation workflows.

Annotation methodology: Each text was evaluated independently without reference to surrounding samples. Confidence scores reflect the annotator's genuine epistemic certainty given only the text provided. Ambiguous samples are explicitly flagged rather than forced into a category. Mixed sentiment cases are labeled Mixed rather than averaged, preserving sub-target information for downstream use.
